Reasons for Allowance

The following is an examiner's statement of reasons for allowance: The prior art of record does not show or suggest the combination of method steps set forth in claims 1 and 11 for making an extruded food product, especially the step of selectively cooling the extrusion die head to closely control the temperature of the extruding raw material, whereby the bulk density of the final extruded product will be controlled to achieve a targeted optimum value. The prior art of record also does not show or suggest the combination of structural elements set forth in claims 5, 9, 10 and 13 for making an extruded food product, especially the water jacket means formed in the stator means of the extrusion die head, and a water supply system connected to the water jacket means to selectively flow a stream of water at lesser temperature than the temperature of the extruding material, whereby the extruding material is temperature controlled as it passes through the extruder to a temperature at which bulk density of the final extruded product is optimized.
